The screenshot shows a code editor with a file explorer on the left. The file explorer lists a 'htdocs' directory containing 'dashboard', 'img', 'webalizer', 'xampp', 'applications.html', 'bitnami.css', 'conn.php', 'favicon.ico', 'index.php', 'showUser.php', and 'try.php'. The 'showUser.php' file is selected. The code in the editor is as follows:

```
1 <?php include "conn.php";
2 $sql = "SELECT UserID, Username, Password FROM usercustomer";
3 $result = $conn->query($sql);
4
5 if ($result->num_rows > 0) {
6     // output data of each row
7     while($row = $result->fetch_assoc()) {
8         echo "UserID: " . $row["UserID"]. " Username: " . $row["Username"]. " Password: " . $row["Password"]. "<br>";
9     }
10 } else {
11     echo "0 results";
12 }
13 $conn->close();
14 >
15
```

Below the code editor, a browser address bar shows 'localhost/showUser.php'.

UserID: 1 Username: Noraphat Password: 123456

The screenshot shows a database management interface. On the left, a tree view shows the database structure: 'itasp' (containing 'New' and 'usercustomer'), 'mysql', 'performance_schema', 'phpmyadmin', and 'test'. The 'usercustomer' table is selected. The main area displays the table data with the following controls: 'Show all', 'Number of rows: 25', and 'Filter rows: Search this table'. Below these are '+ Options' and a table with columns 'UserID', 'Username', and 'Password'. The table contains one row: UserID: 1, Username: Noraphat, Password: 123456. Below the table are controls for 'Check all', 'With selected:', 'Edit', 'Copy', 'Delete', and 'Export'.

| UserID | Username | Password |
|--------|----------|----------|
| 1 | Noraphat | 123456 |
